Problems running the Maven Build?

If you're running Docker Toolbox (Mac or Windows before 10 Pro), then you may have problems either connecting to the Daemon, or you may get obscure errors saying:

```
"unable to find valid certification path to requested target"
```

The solution is to run on the command line:
Docker-machine env

This will give an output like:

```
export DOCKER_TLS_VERIFY="1"
export DOCKER_HOST="tcp://192.168.99.100:2376"
export DOCKER_CERT_PATH="XXX"
export DOCKER_MACHINE_NAME="default"
export COMPOSE_CONVERT_WINDOWS_PATHS="true"
```

Now add the following two tags to the <configuration> tag of the Docker Maven plugin configuration, in the pom.xml file:

```
<dockerHost>tcp://192.168.99.100:2376</dockerHost>
<certPath>XXX</certPath>
```

Make sure the values in the tags match the output your received in the previous step.
